

JL projection as a high-dimensional K-means diagnostic

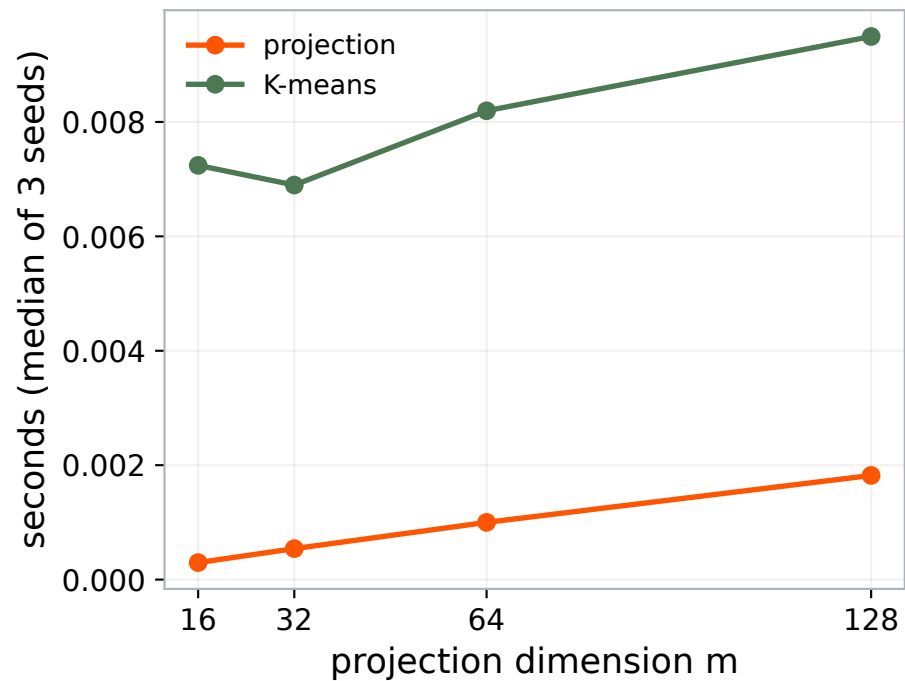

Original-space SSE from projected labels

JL pairwise distortion 600 points $\rightarrow$ 179,700 pairs

Measured wall-clock time

Synthetic data $\cdot$ $n = 600$, $d = 512$, $K = 5 \cdot 3$ projection seeds $\cdot$ K-means $n_{\text{init}} = 10$ $\cdot$ no global-optimum claim
